

# Maximize Potential. Minimize Costs.

*BellSouth® FastAccess® Internet Service for Business*

## **Boost your business productivity and stay ahead of the competition with BellSouth® FastAccess® Internet Service for Business**

### *What exactly is BellSouth FastAccess Internet Service for Business?*

BellSouth FastAccess Internet Service uses Digital Subscriber Line (DSL) technology which utilizes existing copper lines to carry voice and data at a dramatically higher speed than is possible with other technologies like dial-up modems. A DSL modem splits your single phone line into two frequencies – one for voice and one for data. This permits the use of your business phone for talking or faxing without interrupting your Internet connection.

### *The speed to run your business more efficiently*

BellSouth FastAccess Internet Service delivers the speed you and your employees need to access information instantaneously. You'll be able to download large text, data and graphics files up to 50 times faster than with a 28.8K modem\*\*. Boost your efficiency by spending less time waiting for information and more time putting it to productive use.

### *Benefits at a glance:*

- High-speed Internet access featuring downloads up to 50 times faster than 28.8K modems\*\*
- Connect your office with one FastAccess DSL connection, for one low monthly rate, whether you have one computer or many\*\*\*
- Rapid Internet access for all of your employees- no more waiting for a dial-up connection
- Remote dial-up access while traveling or working from home†
- Access the Internet while you talk or fax on the same line
- FastAccess DSL from BellSouth, a company you can depend on for your business needs today and in the future

### *Market coverage*

By the end of 2001, close to 70% of all telephone lines in the BellSouth region will be DSL capable! This provides you with significant reach and capabilities for your business.

### *BellSouth FastAccess Internet Service for Business makes you work fast*

With BellSouth FastAccess Internet Service, you can harness the power of the Internet. You can quickly download and upload graphics, sound and video files as well as complex Web pages. You can research Web-based data sources, publish large Web sites to Web hosting servers, operate simultaneous active browser windows and conduct e-commerce.

### *Stay competitive with BellSouth FastAccess Internet Service for Business*

BellSouth FastAccess Internet Service gives you a powerful tool to access the full potential of the Internet for your company. Whether you have one PC or multiple PC's, FastAccess DSL offers support so you can manage and operate your business at incredible speed. Multiple employees can be online at one time using a single FastAccess DSL connection – all at one low monthly rate. You'll download and access information faster, freeing you and your employees to concentrate on things that build your business.

#### *At A Glance*

- High-speed DSL Internet access
- Connect your multiple PCs with one FastAccess connection
- No more waiting to dial-up
- Access the Internet while you talk or fax on the same line
- Reduce cost
- Increase productivity and efficiency

## The benefits of BellSouth FastAccess Internet Service for Business

### Time to Download a 3.75 Megabyte File (more than 2 floppy disks of data)

#### MIN:SEC\*

1.5 Mbps FastAccess.....	00:20
128 Kbps ISDN.....	04:00
64 Kbps ISDN.....	08:00
56 Kbps dial-up mode.....	09:09
28.8 Kbps dial-up modem.....	17:47

**Speed** – Download and upload files in seconds. With BellSouth FastAccess Internet Service, you can download a 3.75 Megabyte file, more than two floppy disks full of data, in as little as 20 seconds, compared to over nine minutes with a 56K modem. Less time waiting means higher productivity and efficiency for your business.

**Rapid Access** – No more waiting to dial-up and no more busy signals. Your time is too valuable to waste with old-fashioned dial-up connections. With FastAccess DSL, Internet access is readily available.

**Multiple or Single User Capability** – Whether you have a business with one PC or multiple PCs, BellSouth offers comprehensive solutions so you can manage and operate your business at incredible speeds. With a router, BellSouth can connect multiple PCs in your office to a single DSL line at no additional monthly cost. As your business grows, you can easily add employees to the same DSL connection.

**Value** – BellSouth FastAccess Internet Service for Business virtually eliminates the need for a dedicated Internet phone line and multiple dial-up accounts for your business by allowing you to access the Internet and talk or fax at the same time. Users can share one DSL connection and have multiple e-mail boxes.

**Remote Access** – BellSouth FastAccess Internet Service for business comes with a back-up dial-up account that offers remote access to the Internet†.

**Reliability** – Get high-speed Internet service from a reliable company that you can trust to be around today and in the future. BellSouth is committed to supporting your business needs.

**Installation** – BellSouth professionally installs FastAccess Internet Service for Business to both single and multiple users at a reasonable cost.

**Security** – In addition to having the added security of a direct connection from your computers to our DSL network, BellSouth customers receive instant discounts on Symantec's Norton™ brand of Internet security products to help protect against dangerous viruses and intrusions into your confidential information.

### BELLSOUTH STATIC INTERNET PROTOCOLS

An IP address identifies a computer, a server, a printer, or other network device that is connected to the Internet, much like your home address identifies where your house is located. As you may know, there are two types of IP addresses, Dynamic and Static. A Dynamic IP changes periodically, while a Static IP always stays the same. BellSouth is pleased to offer Static IP addresses in addition to Dynamic IP addresses. If your company needs to allow external access to a specific device on its network, such as a printer, then you will need a Static IP address for that device. Here are some common uses for Static IP:

- VPN- Virtual Private Network
- Host an e-mail or FTP Server
- Host a web site
- Host an applications server
- Allow remote access to a LAN
- Meet requirements for firewall security

Ask your BellSouth representative if a Static IP address is right for you.
